Updated September 4, 2017
I. **Introduction to the Computer Engineering Program**

Computer Engineering (CEN) is a multi-disciplinary program that builds on the fundamentals of Computer Science, Electrical Engineering, Applied Mathematics, and Physical Sciences. Graduates of this program will have the knowledge and skills necessary to advance the design, system integration, testing, evaluation and deployment of the state-of-the-art hardware and software for systems that include computing, communications and networking (wired and wireless), control functions, sensing, signal processing and actuation.

The Ph.D. program is intended for students with excellent skills in mathematics and physical science that are interested in gaining an in-depth knowledge of the foundational principles of engineering, as they pursue a career in academia, research or highly technical entrepreneurial innovation. The Ph.D. program provides a broader and more in-depth preparation than the M.S. program, in anticipation of a demonstrated ability to independently pursue more creative and substantive innovation with higher impact.

II. **Objective of the handbook**

The purpose of this handbook is to provide guidance and information related to admission, degree requirements, and general policies and procedures. Please note that in some cases you will find differences between the Graduate Catalog and the Computer Engineering program requirements. In these cases, CEN has established higher standards. Students must satisfy both sets of requirements. Please note that policies and procedures are occasionally amended to improve the program. Changes will be communicated to students through e-mail, and posting on the paper and online bulletin boards.

III. **Student responsibility**

All students are expected to become familiar with university and program policies and procedures and abide by the terms set forth. Information is available online. Most importantly you should visit the following websites:

- The Office of Graduate College – [http://graduate.asu.edu](http://graduate.asu.edu) - visit the section on policies and procedures.
- The Schedule of Classes – [www.asu.edu/catalog](http://www.asu.edu/catalog)
- The International Student and Scholars Center – [https://students.asu.edu/international](https://students.asu.edu/international), if applicable.
- The Ira A. Fulton School of Engineering – [http://engineering.asu.edu](http://engineering.asu.edu)
IV. Faculty responsibility
The members of the faculty of Computer Engineering have diverse backgrounds and knowledge. They are available to guide you in your plan of study and your educational and career goals. We encourage you to take the opportunity to make individual appointments with faculty members with whom you have common interests. Please refer to a list of the faculty names, areas of expertise, and research interest on the Computer Engineering website http://cen.engineering.asu.edu/.

V. Admission and eligibility to the doctoral degree program
The Computer Engineering doctoral degree requires a background in computer engineering, computer systems engineering, electrical engineering, and computer science. However, in some cases, students with non-traditional educational backgrounds will be considered for admission. These students may be required to take fundamental courses to better prepare them for the program coursework. A student is encouraged to contact a graduate advisor in the respective concentration Advising Center to obtain advice on their educational pursuits.

Eligibility – A minimum of a bachelor’s degree (or equivalent) or a graduate degree from a regionally accredited College or University of recognized standing in a related field such as: Computer Engineering, Computer Systems Engineering, Electrical Engineering, and Computer Science.

Application - All students are required to submit an application with the Office of Graduate College and pay the required fee in order to have their application properly processed.

Application deadlines – December 31 for Fall and August 15 for Spring:
To receive full consideration, we ask that you have all the required documents submitted by the deadline.

GRE scores - Students (International and Domestic) are exempt from taking the GRE who have degrees from an ABET accredited program (from US or overseas institutions) and meet the minimum GPA requirements of the academic units. Students, who do not meet these requirements as outlined, will be required to take the GRE.

English Proficiency - The University requires all international applicants from a country whose native language is not English to provide the Test of English as a Foreign Languages (TOEFL), the International English Language Testing System (IETLS), or the Pearson Test of English (PTE) scores. Please note that your application will not be processed until the university receives official scores, which are valid two years from the start date of the degree program. There are some exceptions for students who have been living in the United States and would like to have the English Proficiency waived. Consult the Graduate Catalog under “English Language Requirement” and the Office of Graduate College.
website for details. Please address all English Proficiency questions to the Office of Graduate Education.

**Personal statement** - The application must include a personal statement. The statement should: 1) explain professional goals and reasons for desiring to enroll in the doctorate program; 2) describe any research experiences; 3) indicate personal research interests; and 4) identify two or three ASU CEN faculty with matching research interests.

**Letters of recommendation** - CEN requires three (3) letters of recommendation, at least one of which must come from former faculty. There is no standard form for letters of recommendation. We encourage letters from people who know you well, such as teachers, professional associates and supervisors. Ask people who can comment on your academic, emotional, intellectual and professional development.

**GPA requirement** – A minimum of a 3.00 cumulative GPA (scale is 4.0=A) in the last 60 hours of a student’s first bachelor’s degree program. A minimum GPA of 3.0 is required in the MS/MSE work for acceptance into the Ph.D. program.

**Application evaluation** - Several factors are taken into consideration when evaluating a student’s application including but not limited to: the student’s cumulative GPA, major, institution, personal statement, letters of recommendation, standardized test scores, performance in individual courses, skills, and research experience.

**Recommended Academic Preparation** – Computer Engineering graduate students should have knowledge in the following topics prior to applying for the program at Arizona State University: Computer Architecture & Organization, Algorithms & Data Structures, Digital Signal Processing, Digital VLSI, Discrete Math, and Random Signal Analysis.

**ASU Recommended Course**

- CSE 230 – Computer Organization and Assembly Language Programming
- CSE 310 – Data Structures and Algorithms
- EEE 203 – Signals and Systems I
- EEE 350 – Random Signal Analysis
- MAT 243 – Discrete Math Structures

**Notice of Admission** - CEN submits its recommendation of admission to the Office of Graduate College and the final notice of admission decision is notified in writing by the Office of Graduate College. You may check your application status on MyASU (my.asu.edu).

**Pre-admission Credits and Transfer Credit** – Only approved graduate-level CEN area courses taken at ASU can be applied towards the CEN Mandatory Concentration Degree
Requirement. No other pre-admission credits and no other transfer credits can be applied towards the CEN Mandatory Concentration Degree Requirement. Up to 30 credits can be applied towards electives for students who already obtained a graduate MS degree from a regionally accredited College or University of recognized standing in a related field, such as Computer Engineering, Computer Systems Engineering, Electrical Engineering, and Computer Science.

VI. Doctoral degree requirements
Degree requirements for the Ph.D. include a minimum of 84 semester hours beyond the bachelor’s degree and deficiency courses. Students are allowed up to 30 credit hours from a previously awarded master’s degree to count towards the degree requirements for the doctoral program, if approved by the student’s supervisory committee and the Program Chair. Only approved graduate-level CEN area courses taken at ASU can be applied towards the CEN Mandatory Concentration Degree Requirement. All other credits from a previously awarded master’s degree can only count towards electives.

The Ph.D. is comprised of four major milestones which all students are required to pass successfully prior to graduation.
   a. Filing an approved Plan of Study
   b. Completion of the core and area coursework
   c. Completion of elective coursework and research hours.
   d. Passing the Comprehensive Examination and approval of the dissertation prospectus to advance to candidacy.
   e. Successful oral defense of an approved written dissertation.

Summary of Degree Requirements for PhD students with a transfer of 30-credit of a previously awarded master’s degree

- 6 credits of core courses or if core courses already taken at ASU as part of previously awarded master’s degree, 6 credit hours of approved graduate-level CEN area courses divided as 3 credits CSE or CEN and 3 credits EEE or CEN.

- 12 credit hours of graduate-level CEN Area Courses
  - 6 of the 12 credit hours should be courses covering two (2) of the five (5) CEN areas (CEN areas listed below).
  - CEN-CS Concentration: 9 credits CSE or CEN and 3 credits EEE or CEN
  - CEN-EE Concentration: 9 credits EEE or CEN and 3 credits CSE or CEN

- 6 to 12 credit hours of approved graduate-level electives
  - All graduate-level CSE, EEE, or CEN courses can be taken as electives
• Other graduate-level Math, Science, and Engineering courses can count as electives if they are on the approved list of electives

• 0 to 6 credit hours of Reading & Conference (CSE 790)
• 12 to 18 credit hours of Research (CEN 792)
• 12 credit hours of Dissertation (CEN 799)
• Comprehensive Exam and Dissertation Prospectus
• Written Dissertation and Oral Defense

Summary of Degree Requirements for Direct PhD students

• 6 credit hours of core courses.
• 24 credit hours of graduate-level CEN Area Courses
  o 6 of the 12 credit hours should be courses covering two (2) of the five (5) CEN areas (CEN areas listed below).
  o CEN-CS Concentration: 9 credits CSE or e CEN and 3 credits EEE or CEN
  o CEN-EE Concentration: 9 credits EEE or CEN and 3 credits CSE or CEN
• 18 to 24 credit hours of electives
  o Up to 6 credits of approved CSE/EEE 400-level courses (list at the end of handbook) can be taken and these count as electives.
  o Up to 12 credits of approved combined courses (5xx/4xx) and 400 level courses can be taken and these count as electives.
  o All graduate-level CSE, EEE, or CEN courses can be taken as electives.
  o Other graduate-level Math, Science, and Engineering courses can count as electives if they are on the approved list of electives.
• 0 to 6 credit hours of Reading & Conference (CSE 790)
• 12 to 18 credit hours of Research (CEN 792)
• 12 credit hours of Dissertation (CEN 799)
CEN Areas

The area courses in the graduate Computer Engineering program are partitioned into five (5) areas of study, and listed in the table located at the end of this handbook. These courses will be referred to as Computer Engineering Area (CEN-Area) courses.

The five (5) areas of study are:

1) Autonomous Systems and Robotics (ASR)
2) Communication and Networks (CN)
3) Distributed, Dependable and Secure Systems (DDSS)
4) Multimedia and Signal Processing (MSP)
5) VLSI, Architecture, and Embedded Systems (VAES)

Core Courses

There are 6 credit hours required core courses for the PhD in Computer Engineering

- CSE 551 – Foundations of Algorithms (3)
- EEE 554 – Random Signal Theory (3)

All students are required to take the core courses, CSE 551 Foundations of Algorithms and EEE 554 Random Signal Theory in their first two semesters. Students in the Computer Systems Concentration (CEN-CS) are required to take CSE 551 in their first semester. Students in the Electrical Engineering Concentration (CEN-EE) are required to take EEE 554 in their first semester. These courses have a pre-requisite of CSE 310 for CSE 551 and EEE 350 for EEE 554. If students are deficient in CSE 310 or EEE 350, they may choose to take these concurrently with the core courses or they can petition to take these in their first semester before taking the core courses.

Mandatory Concentration Requirement

The Computer Systems concentration requirements are as follows:

- At least 9 credit hours of graduate level CEN-Area courses in CSE or CEN, and
- At least 3 credit hours of graduate level CEN-Area courses in EEE or CEN.

The Electrical Engineering concentration requirements are as follows:

- At least 9 credit hours of graduate level CEN-Area courses in EEE or CEN, and
- At least 3 credit hours of graduate level CEN-Area courses in CSE or CEN.

Internship courses do not count toward the degree 84-credit requirement.
**CEN Area Courses**

**CEN-Area Course Requirements:**
At least 6 credit hours of graduate-level CEN area courses covering two (2) of the five (5) areas.
For CEN-CS students, at least 9 credit hours CSE or CEN courses and at least 3 credit hours EEE or CEN courses.
For CEN-EE students, at least 9 credit hours EEE or CEN courses and at least 3 credit hours CSE or CEN courses.

**Total credits hours for program area courses:**
For PhD students with previously awarded MS degree, minimum of 12 credit hours.
For Direct PhD students, minimum of 24 credit hours.

**Elective Courses**

**Direct PhD students:** 18 to 24 credit hours of graduate courses in Science, Engineering, or Mathematics from the list of elective courses as approved by the Computer Engineering Graduate Programs Committee (GPC) or graduate-level CSE, EEE, and CEN area courses, or from CEN-approved list (refer to list at the end of handbook) of CSE/EEE 400-level courses (up to 6 credits) or CSE/EEE combined courses 5xx/4xx (up to 12 credits).

**PhD students with previously awarded MS degree:** 6 to 12 credit hours of graduate courses in Science, Engineering, or Mathematics from the list of elective courses as approved by the Computer Engineering Graduate Programs Committee (GPC) or graduate-level CSE, EEE, and CEN-area courses.

The combined set of area courses and elective courses should be selected to ensure the student has adequate preparation to pursue research in the selected area of the thesis.

**For Direct PhD Only - 400-Level Courses and Combined Courses**
- No more than 6 hours of 400-level coursework can be included on the graduate student program of study.
- No more than 12 hours of combined courses (4XX/5XX) can be included on the graduate student program of study.
- No more than a total of 12 hours of a combination of 400-level and combined courses (4XX/5XX) can be included on the graduate student program of study.
- If a 400-level course is combined with a 500-level course, CEN students will be required to enroll in the 500-level course.
- 400-level and combined (4XX/5XX) courses count towards elective credits.
**Reading and Conference (CEN 790)**
Up to 6 credits of Reading and Conference (CEN 790) can be taken with a limit of 3 credit hours of CEN 790 per semester.

**Formulation of Plan of Study**
During their first semester of study, each student must formulate and submit an official plan of study (iPOS) which will be reviewed for approval by the CEN Program Chair. The plan of study should satisfy the degree requirement as described in this handbook. Coursework completed before submitting a plan of study may not count toward a student’s degree requirements if the coursework does not satisfy the degree requirements as described in this handbook.

The plan of study will list all courses that are to be completed as part of the student’s degree program as well as a schedule for completion of any deficiencies. The plan of study may be amended as the student progresses through the program with the approval of the student’s academic advisor and the CEN Program Chair.

Courses with grades of “D” (1.00) and “E” (0.00) cannot be included on a POS and should be replaced with other courses.

A worksheet for developing the plan of study is attached as an appendix to this document. Please note that this worksheet is supplied as a guide and does not necessarily provide details of all degree requirements. Students should consult this handbook for detailed information about degree requirements and their submitted iPOS must satisfy the degree requirements as described in this handbook.

The CEN Graduate Program Chair can disapprove an iPOS submitted for review and can request corrections to a student’s iPOS anytime an iPOS is submitted for review or anytime a change to a previously approved iPOS is submitted for review. When an iPOS is submitted for review (new or revised), corrections can be requested by the CEN Program Chair even for items that were approved previously but are deemed at the time of the most recent review not to satisfy the degree requirements.

**Supervisory Committee**
During the first semester in the PhD program, the PhD student must select a PhD faculty advisor with endorse-to-chair approval from the Computer Engineering Program Graduate Faculty. The list of faculty members is available at [https://cen.engineering.asu.edu/faculty/](https://cen.engineering.asu.edu/faculty/)

At least one semester before taking the Comprehensive Examination, the PhD student must form a graduate supervisory committee. The chair of the committee will be the PhD faculty advisor who directs the student’s research program. The role of the supervisory committee is to provide guidance and direction for the student’s educational and research plan. As such, the committee must have the necessary expertise to guide and evaluate research in the proposed dissertation area. A minimum of four committee members is required, including the committee chair or two co-chairs. The committee chair or at least one of the co-chairs must be a Computer Engineering Graduate Faculty member with the right to chair. At least two members must be CEN Graduate Faculty members. The supervisory committee must be approved by the CEN Program Chair and by the Office of Graduate College prior to taking the Comprehensive Examination.
Comprehensive Exam and Dissertation Prospectus

A student must pass a comprehensive examination before being formally admitted to candidacy for the PhD. The examination is administered by the student’s graduate supervisory committee after the student has essentially completed coursework. The student must have an approved formal plan of study before taking the exam. The exam is typically completed in the 6th semester of study at ASU for PhD students with a previously awarded MS degree, and by the 9th semester of study at ASU for Direct PhD students. If the exam is not completed by the end of the designated period, approval for registration must be obtained from the supervisory committee chair and the CEN Program Chair.

The comprehensive examination will be given by the four members of the supervisory committee. The comprehensive examination will consist of a written part and an oral part. Once the written part is approved by the chair or co-chairs of the supervisory committee, the student must schedule the oral presentation and must submit the written part to the supervisory committee 10 working days in advance of the oral presentation. The written part will be composed of a background paper on the area of research, and includes the current status of this area, a summary of work the student has already done, and a thesis proposal (dissertation prospectus). The oral part will be an examination on the contents of the paper in general and thesis proposal in particular. The oral portion consists of a presentation which is open to the public and a closed session with the committee members.

The student is required to bring a Doctoral Comprehensive Examination form available on the Computer Engineering website to the oral examination. Following completion of the exam, the completed Doctoral Comprehensive Examination form must be returned to the student’s assigned advising staff to be given to the CEN Program Chair. Should a student fail the examination, the advisory committee will decide if and when a retake of the examination is possible. A reexamination may be administered as early as three months and no later than one year from the date of the original examination. Only one retake is allowed.

The student will be granted candidacy by Graduate College immediately after passing the comprehensive exam.

The oral portion consists of a presentation which is open to public and a closed session with the committee members.

The final committee-approved version of the dissertation prospectus (thesis proposal) that is included in the written part, is a binding agreement between the student and the supervisory committee and will be enforced by the CEN Program. Satisfactory completion of the research as outlined in the prospectus will result in an approved dissertation. Following approval of the written dissertation by the supervisory committee chair, the student must schedule and pass a final oral defense.
**Dissertation and Oral Defense**

A student is expected to become an active participant in a research program during the first semester of study in the PhD program. Research leading to a dissertation is performed under the direction of the supervisory committee. The candidate must register for a total of at least 12 credits of Research (CEN792) and 12 credits of Dissertation (CEN799). Credits for Research (CEN792) will be graded with options of C, D, E, Z, or Y. A grade of Y indicates satisfactory progress and is at the discretion of the dissertation advisor. Such a grade may later be changed to a letter grade or left on the permanent record. The Y is the usual grade for Research. The Z grade is typically used for Dissertation (CEN799) credits until you complete your dissertation defense. When the dissertation is satisfactorily completed, a grade of Y is given for successful completion of the dissertation and for passing the oral dissertation defense. If a student does not complete the dissertation, the dissertation advisor may assign a failing grade of E for CEN799.

Dissertation research will usually be performed on campus. Off-campus research will be considered only by special petition. Such research will be considered only if the research cannot be done on campus and if the problem appears to be of sufficient merit that it should be pursued even though proper facilities do not exist on campus.

Students are required to submit at least one paper based on the dissertation research to a CEN-related refereed journal before the final examination. They are strongly encouraged to present a conference paper(s) on their work during the course of the research. These publications are normally jointly written with the advisor and other appropriate faculty.

Upon completion of the dissertation, the student must successfully defend it by passing an oral examination. This defense may be conducted no earlier than six months after the student’s formal admission to candidacy. In addition, once the dissertation is approved by the chair or co-chairs of the supervisory committee, the student must submit the dissertation to Graduate College for format review at least 10 calendar days before the oral defense. No exceptions to this rule will be made. In addition, the thesis must be delivered to all committee members at least 10 calendar days before the oral defense. The oral defense must be scheduled through Graduate College 10 working days in advance.

**The student is required to bring a Doctoral Defense Report form and a list of archival publication form available on the Computer Engineering website to the oral examination.** The forms must be signed by the PhD committee and returned to the student’s advising staff to be given to the CEN Program Chair.

All members of the supervisory committee must attend the oral dissertation defense in person. Teleconferencing is prohibited without the written approval of Graduate College. The chair or at least one co-chair must attend the oral defense in person. Members attending remotely must be reported at the time of scheduling the oral defense.

Successful oral defense of the dissertation fulfills the CEN 799 requirement.
Steps to Preparing for Your Defense

Prior to defense:
1. Student should have submitted a paper based on dissertation research to a CEN-related refereed journal. Also, a student is encouraged to present work at a conference during the course of research.
2. Obtain a consensus of approval from the committee chair and the members to proceed with the oral defense.
3. Schedule a date and time with your committee for the oral defense.
4. Important: Ensure that a minimum of 50% of the official committee be physically present at the defense. The Chair must be physically present at the defense. If at least 50% of the committee cannot be physically present, the defense must be rescheduled.
5. Visit the Office of Graduate College website and MyASU Programs and Degree under the defense tab to become familiar with the dates and deadlines on format approval and oral defense.
6. REVIEW ALL GRADUATION DEADLINES!
   http://graduate.asu.edu/graddeadlines.html

10 days prior to the defense:
These steps are required to be completed prior to 10 working days from the date of oral defense.
1. Reserve a room for your defense. Contact your respective concentration advising center for help with room reservation.
2. Submit an electronic version of your abstract with title, full names of your committee members, defense date/time/place, and your name as you want it to appear on the defense announcement to your respective concentration advising center.
3. Schedule your defense through your MyASU (my.asu.edu) defense tab.

On the day of the defense:
1. Set-up all your equipment at least one half-hour prior to your presentation to make sure they work.

After the defense:
1. Your committee will discuss the results of the exam with you and may have additional comments for you. At the end, the committee will make a recommendation: Pass, Pass with minor revisions, Pass with major revisions, or Fail.
2. Revisions are normal and must be completed within one year. This includes remaining registered and uploading the finished document on MyASU Format Tools.
3. If you have revisions you must submit a copy of the Doctoral Defense Report Form (Pass/Fail form) to the Office of Graduate College within 10 working days of the defense. A copy of the pass/fail form should be submitted to the advising office as
well. Your graduate advisor can assist you by emailing the form to the Office of Graduate Education.
4. You must be registered for at least one credit hour graduate level coursework each semester until the final submission of your dissertation.
5. After you have passed the defense and/or completed all revisions hand-deliver the original Doctoral Defense Report (Pass/Fail Form) to your respective concentration advising center. The graduate advisor will email the form to the Office of Graduate College.
6. Upload your dissertation online through ProQuest.

VII. General Information

a. Research standards for publication of dissertation
   Graduate research is the study of an issue that is of sufficient breadth and depth to be publishable in a CEN-related journal. The effort should reflect a minimum of 1,500 hours of thoughtful work for a dissertation (Ph.D.). The research should follow the ‘scientific method’ and thus be both objective and reproducible. The dissertation should demonstrate independent, original, and creative inquiry. There should be predefined hypotheses or developmental goals and objectives that are measurable and can be tested. The document should demonstrate proficiency with written English and should conform to the Office of Graduate College format guidelines.

b. Financial assistance and/or fellowships
   The Computer Engineering Program’s goal is to provide support to all incoming Ph.D. students. According to the student’s academic performance and past academic research, funding offers will be extended to individual students with the highest academic achievements. We encourage students to highlight their past academic achievements in their personal statement and in their resume.

c. Continuous Enrollment and Leave of Absence Policies
   Once admitted to a graduate degree program, doctoral students must be registered for a minimum of one graduate credit hour (not audit or undergrad) during all phases of their graduate education. This includes periods when they are engaged in research, working on or defending theses or dissertations, taking comprehensive exams, or in any other way using university facilities or faculty time including the term in which they graduate. This credit must appear on the Plan of Study or must be an appropriate graduate-level course (e.g., 695, or 795, 580, Continuing Registration). Courses with grades of “W” and “X” and Incomplete (changes to permanent incomplete grade after one year) are not considered valid registration for continuous enrollment purposes.

   Students planning to discontinue enrollment for a semester or more must request approval for a leave of absence. Student may petition the Office of Graduate College for a leave of absence for a maximum of two semesters during their entire program. A petition for a leave of absence, endorsed by the members of the student’s supervisory committee and the CEN Program Chair, must be approved by the Office of Graduate College. This request must be filed and approved before the anticipated absence.
An approved leave of absence will enable students to re-enter their program without re-applying to the university. Students who do not enroll for a fall or spring semester without an approved leave of absence by the Office of Graduate College are considered withdrawn from the university under the assumption that they have decided to discontinue their program. A student removed for this reason may reapply for admission to resume his/her degree program; the application will be considered along with all other new applications to the degree program.

A student on leave is not required to pay fees, but in turn is not permitted to place any demands on university faculty or use any university resources.

d. **Maximum Time Limit**

Doctoral students must complete all program requirements within a ten-year period. The ten-year period starts with the semester and year of admission to the doctoral program. Graduate courses taken prior to admission that are included on the Plan of Study must have been completed within three years of the semester and year of admission to the program (previously awarded master’s degrees used on the Plan of Study are exempt).

In addition, the student must defend the dissertation within five years after passing the Comprehensive Examinations. Therefore, the maximum time limit is the shortest of the following:

1. Time period since initial enrollment (10 year time limit).
2. Time after passing the comprehensive exams (5 year time limit).

Any exceptions must be approved by the supervisory committee and the Office of Graduate College and ordinarily involves repeating the comprehensive examinations. The Office of Graduate College may withdraw students who are unable to complete all degree requirements and graduate within the allowed maximum time limits.

e. **Registration requirements for research assistants (RA) and teaching assistants (TA)**

Students awarded an assistantship within the Ira A. Fulton School of Engineering are required to be registered for at least 12 credit hours. Audit credit hours do not count towards the 12 credit hours.

Students who obtain an assistantship outside the Ira A. Fulton School of Engineering are required to be enrolled a minimum of 6 credit hours. Audit credit does not count towards the 6 credit hours. Enrollment in continuing registration (CEN 795) does count towards the 6 hour requirement.

TAs and RAs are treated as residents for tuition purposes. To be eligible for tuition remission, TAs and RAs must be employed a minimum of 10 hours per week (25
percent Full Time Equivalency \{FTE\}). TAs/RAs working 10-19 hours per week (25-49 percent FTE) receive a 50 percent remission of tuition for the semester or summer session of their employment. TAs/RAs working 20 hours per week (50 percent FTE) do not pay tuition during the semester or summer session of their employment. In addition, the university pays the individual health insurance premium for those TAs and RAs working 20 hours per week (50 percent FTE).

f. Satisfactory Progress, Academic Probation, Progress probation, and Withdrawal from the CEN Program

Each semester, the Computer Engineering Program reviews students’ files for satisfactory progress towards completion of the degree. All students are placed on one of the four categories:

1) Satisfactory progress;
2) Academic Probation;
3) Progress probation;
4) Withdrawal from the CEN Program.

1. Satisfactory progress means that a student does not have any academic and progress probationary issues. In addition to the probationary rules, satisfactory progress includes each semester communication with the student’s Committee Chair regarding his/her progress.

2. Academic Probation pertains to grades that might affect Program and University policies including graduation. The following are notices/letters you will receive if one of these pertains to your academics:
   - GPA below 3.0 in approved POS courses.
   - Overall post baccalaureate (cumulative) GPA below 3.0.
   - Overall graduate (500 level or above) GPA below 3.0.

3. Progress probation pertains to issues dealing with making progress towards a degree. The following are notices/letters you will receive if one of these pertains to your academics:
   - Failure to pass the Ph.D. Comprehensive Examination.
   - Failure to pass the PhD Prospectus

4. A student is recommended for withdrawal from the CEN Program if she or he fails to meet the probationary standards placed upon her/him in the semester mentioned in the probationary letter. The student will receive a letter from the Computer Engineering Program explaining the reasons for the withdrawal. The student will have 5 calendar days from the date of the letter to appeal the decision. The CEN Graduate Programs Committee (GPC) will review the case and will make the necessary recommendation. The Graduate Program Chair, on behalf of the GPC, will provide a written explanation of the outcome. If the outcome is
favorable, the student will have to meet all the outlined requirements at the end of the specified period. The student will be required to sign an agreement acknowledging the recommendations and the consequences if the agreements are not met. If the GPC recommends that the appeal is not granted in favor of the student, the Graduate Program Chair, on behalf of the GPC, will recommend to the Dean of Academic and Student Affairs to withdraw the student from the CEN Program. The student will then have the opportunity to appeal to the Ira A. Fulton Schools Standards Committee which reviews the student’s case and makes the final ruling to the Associate Dean and the CEN Program. If the appeal is not granted in favor of the student, the Dean of Academic and Student Affairs will recommend to the Office of Graduate College to withdraw the student from the CEN Program. Please refer the Office of Graduate College website for policies and procedures or contact your respective concentration graduate advisor.

g. Academic Integrity

The highest standards of academic integrity are expected of all graduate students, both in the academic coursework and in their related research activities. The failure of any graduate student to meet these standards may result in serious consequences including suspension or expulsion from the university and/or other sanctions as specified in the academic integrity policies of individual colleges as well as the university.

Violations of academic integrity include, but are not limited to: cheating, fabrication, tampering, plagiarism, or aiding and/or facilitating such activities. At the graduate level, it is expected that students are familiar with these issues and each student must take personal responsibility in their work. In addition, graduate students are expected to follow university guidelines related to the Student Code of Conduct. University policies related to academic integrity and code of conduct are available in the Office of Student Life, or at www.asu.edu/studentaffairs/studentlife/judicial.

h. CEN 584 Internship (Curricular Practical Training)

Curricular Practical Training (CPT) is an academic experience usually obtained at off-campus work settings, allowing the student to apply knowledge and skills gained in various classes. It is intended as a unique, hands-on learning experience to provide students with a number of valuable skills that they can use upon graduation from their graduate degree programs. Accordingly, it is not available to full-time or part-time workers regularly employed by the company where the internship is proposed.

The CPT is available to both domestic and international students. However, international students must work with the International Students and Scholars Center (ISSC) and submit additional documentation to obtain work authorization. Furthermore, international students must include the CPT course(s) CEN 584 (1 credit hour) as an integral part of their Program of Study, reflected by their approved iPOS.
The CPT courses (up to three 1-credit CEN 594) should be included within the first 84 credits on the student’s iPOS. It is highly recommended that the CPT course(s) be listed at the initial submission of the student’s iPOS during the first semester of study. (Note that each student is required to file an iPOS by the end of his/her first semester of study). Later additions of CPT courses must be requested and approved at least one full semester (fall, spring or summer) prior to the proposed start date of the first internship course. For example, a student planning to do an internship during the summer semester should have an approved iPOS with the internship courses before the beginning of classes in the preceding Spring semester. An internship course cannot be added to an approved iPOS once all coursework has been completed. Exceptions may be made if the internship is relevant to thesis (or dissertation) research. The Graduate Program Chair will determine the need for a CPT internship in such cases in consultation with the Graduate Academic Advisor.

In order to be eligible for internship, a student must be in good academic standing and not have an academic integrity violation in a course for two full semesters (summer semesters not included) from the initial reporting of the incident. For example, a sanctioned academic integrity violation initially reported on April 15, 2016 will make the student ineligible for this approval until the end of the Spring 17 semester.

International students need to be aware of immigration policies and regulations, which may jeopardize their academic status. Hence, it is strongly recommended for international students to consult with the International Students and Scholars Center (ISSC).

All students (domestic and international) may take part in an Out-Of-State internship in the Summer semester. The eligibility requirements for CPT internships remain the same as mentioned.

During the regular Fall and Spring semesters international graduate students in F-1 status must register for a minimum of nine (9) credit hours to maintain full-time status and be enrolled in a minimum six (6) credit hours of in-person, on-campus coursework at an ASU campus. A maximum of three (3) credit hours of online courses is permitted. The CEN 580 Practicum course will not count as satisfying the student’s “physical presence” at ASU. Students will not be able to take part in internships outside the Phoenix metropolitan area. In some cases, students may be approved to do an internship in Tucson or other nearby locations to Phoenix, as long as the student is able to prove they can physically attend their courses on campus. Students may take part in an Out-Of-State internship during their last semester of study if they completed all their other coursework in prior semesters and if such an internship is approved by the ISSC.

Required documents and forms for the internship proposal must be submitted to the respective CEN concentration Advising Office at least two weeks prior to the beginning of the semester in which the internship is planned. Students will not be able to request late-add registration of the CEN 584 Internship credit to their class schedule after the drop/add deadline of each semester.
An approved proposal is required before commencing the internship. The request will include a statement from the employer that indicates they understand that the work is to satisfy a degree requirement. A sample letter and other required forms are available from the respective concentration advising center and are posted on the Computer Engineering website. Students must receive approval from their faculty advisor and from the Graduate Program Chair before registering for CEN 584. **In order to register for CEN 584, a student must have a CUM GPA of 3.00 or higher.** A Plan of Study must be filed with the Office of Graduate College showing the internship course(s) before registering for CEN 584. All application materials for an internship must be completed by the last day of regular registration for any semester. The student must take classes appearing on the Plan of Study the semester following the internship.

The Internship course cannot be added to an approved iPOS once all coursework has been completed. Exceptions may be made if the internship is relevant to thesis (or dissertation) research. The Graduate Program Chair will determine the need for a CPT internship in such cases in consultation with the PhD Faculty Advisor. Note that approval of an iPOS with the CEN 584 course confirms that the internship is an integral part of the degree requirements as planned by the student.

**Renege:** (verb) to fail to carry out a promise or commitment
Never accept a job with the intention of turning it down if “something better” comes along. Not only is it inconsiderate and unprofessional, it also reflects badly on Arizona State University and might negatively impact another ASU student’s opportunity with that employer. Also, employers communicate with each other and you don’t want to get a bad reputation.

After you have given your decision and accepted an offer, stop looking. Inform other employers who have extended offers that you have accepted another position. Don’t accept further interview invitations or search further. Please refer to NACE’s Playing Fair…Your Rights and Responsibilities as a Job Seeker [http://www.naceweb.org/playing_fair/](http://www.naceweb.org/playing_fair/) to become familiar with Principles for Professional Practice.

**A five-page final report is required** before a grade and credit is given. The final report must be submitted to the internship supervisor for comments and then to the faculty advisor for grade assignment.

**i. Optional Practical Training (OPT)**
Please visit the International Students Services website for details regarding OPT and Pre-OPT. Students must be in good academic standing and have an approved iPOS. A student does (Pre-) OPT at his/her own risk since if the student doesn’t graduate in the semester indicated on the iPOS, no letter will be issued by advising to support a later graduation date unless the delay is for reasons beyond the control of the student.

**j. CEN 790 Reading and Conference (Independent Study)**
A maximum of 6 credit hours of independent study coursework are available for Ph.D. students. The student must get written approval from the supervising faculty outlining the coverage of the content. The Independent Study form must be approved by the
Program Chair and will be placed in the student’s file. After completion of the independent study, the student needs to submit a written report to the faculty supervising the independent study. Once the report is approved by the supervising faculty, the report and the independent study grade form need to be submitted to the student’s assigned advising staff to be given to the CEN Program Chair for review and approval.

k. Engineering Student Organizations
There are dozens of engineering student organizations and teams ranging from honors and professional associations to groups creating underwater robots, concrete canoes and launching rockets. Student organizations are excellent opportunities to learn about career possibilities as many of the student groups operate in conjunction with industry professional societies … get involved today!
Please visit http://studentorgs.engineering.asu.edu/ for a list of Engineering Student Organizations.

l. Instructional Concerns and Course-Related Complaints
Being part of a large university creates opportunities to learn from a diverse instructor population with different teaching styles and modalities for delivering course content. Courses are offered by a diverse set of faculty including those who are research intensive, those whose primary responsibility is teaching, and part-time faculty who are working in the field. Based on enrollment or modality of offering, faculty may also be supported by graduate student teaching assistants and graders. This diverse higher education delivery platform may differ significantly from the high school experience, and while it provides opportunity to expand the student’s ability to learn and develop problem solving skills, concerns and conflicts with requirements and instructors may occasionally arise. CEN students with instructional concerns should review and adhere to the following guidelines for attempting to resolve their issues. First and foremost keep in mind that the faculty and advising staff are experienced, dedicated educators that are here to help you achieve your educational goals but at the same time they have a responsibility to ensure standards are maintained and student outcomes are achieved prior to graduation. The university culture recognizes the value of diversity in multiple dimensions as well as the presumption of expertise and academic freedom of the faculty.

Communicate with your Instructor
If you have a difference of opinion with your instructor or teaching assistant (TA), or have concerns about technical or administrative aspects of the course, visit the instructor or TA during office hours or contact them via email (if you cannot visit them during the office hours). Express your concerns clearly and respectfully and ask for help. Be sure to provide succinct information about what you are having trouble understanding in the course or your concern. Instructors and TAs are here to help. Please remember that you are responsible for pre-requisite knowledge/skills required for a course and regularly studying the material taught in the course. The teaching staff may not be able to help you with your problem if you lack in the pre-requisite knowledge/skills or have not been keeping up with the course
material. As a guideline, you should be spending three hours studying every week for each hour of course credit. Thus you should schedule 8-10 hours of time each week to devote to each 3-credit course. In addition, make sure to resolve the issues as soon as they occur and maintain all documentation. For example, if the assignment instructions are not clear, get the clarification on the day the assignment is assigned and do not wait until the deadline of the assignment.

If, after communicating with your instructor or TA, you are still having problems in the course, connect with your academic advisor to understand your options moving forward.

Connect with your Graduate Program Chair
If you are unable to resolve the concern after initial contact with the instructor or the TA, and you have met with your academic advisor, you should then connect with the Computer Engineering Program Chair (or the department offering the course). The Program Chair will confer with the instructor and/or TA to better understand the concern and try to resolve the problem. Please note that before meeting with the Graduate Program Chair you should have made a reasonable effort to meet with the course instructor (not just the TA) and get the issue resolved. When contacting the Program Chair provide all the relevant details such as the course syllabus, assignment handout, email exchange with the instructor etc. so that the Graduate Program Chair can promptly act on your concerns. Please be brief and precise in the description of your concerns. In some cases, the Program Chair would like to meet you. When coming for the meeting please bring along all the relevant documents.

If the instructional concern is not resolved with the Program Chair or the department offering the course, contact the Associate Dean of Academic and Student Affairs’ office for the college offering the course for assistance.

Remain Focused
When faced with instructional concerns, it is important to remain focused on the rest of the course while addressing specific areas that are under review. Be sure to stay connected with your academic advisor if there are any changes in your situation.

NOTE:
- Misrepresentation of facts or disrespectful behavior when confronting your instructor or teaching assistant is considered an academic integrity violation.
- Maintain all documentations.
- Act proactively and promptly.

In Summary, Guidelines for Avoiding Problems
- Be sure you have the necessary prerequisite knowledge before starting a course;
- Attend class and on-line exercises regularly;
- Devote time each week to studying to avoid getting behind;
- Contact the TA (if assigned) or instructor during office hours at first sign of trouble and come prepared to ask precise questions and to explain your difficulty
- Accept the fact that you grow intellectually and professionally by being challenged and learning to deal with diverse expectations and environments

Process for Resolving Conflicts in Grading, Course Expectations, etc.
- Contact the TA (if available) or instructor to explain your concern and seek resolution;
• If the TA/instructor has attempted to assist you but you are still having academic difficulty that is causing personal stress or hindering your academic success, see your Academic Advisor;
• If the TA/instructor is not responsive or does not provide a legitimate response/accommodation, then contact your Graduate Program Chair.
• If you still feel there is a legal, ethical or procedural violation that is victimizing you, contact the Office of the Associate Dean of Engineering for Academic Affairs.
• Circumventing this process will be considered a violation of professional ethics and protocol.
## Computer Engineering Areas of Study and Area Courses

1. ASR – Autonomous Systems & Robotics  
2. CN – Communications and Networks  
3. DDSS – Distributed, Dependable, Secure Systems  
4. MSP – Multimedia and Signal Processing  
5. VAES – VLSI, Architecture & Embedded Systems

Course Descriptions
For course descriptions please see the course catalog: [https://webapp4.asu.edu/catalog/](https://webapp4.asu.edu/catalog/)
Appendix I
Computer Engineering Graduate Program
Prospective Student Information and Study Guide

Computer Engineering graduate students should have knowledge in the following topics prior to applying for the program at Arizona State University: Discrete Math, Digital Signal Processing, Computer Architecture & Organization, Algorithms & Data Structures, and Random Signal Analysis.

For each of the topics there is a suggested book and list of topics along with suggested Chapters from the book in some cases. Note that a student is free to study from any other relevant book on the subject.

Random Signal Analysis (ASU Course: EEE 350)

1. Axiomatic probability
2. Random variables, distribution functions, and density functions
3. Special distributions: Gaussian, exponential, etc.
4. Expectation and variance
5. Multiple random variables
6. Central limit theorem and law of large numbers
7. Maximum-likelihood estimation and confidence intervals
8. Random processes
9. Statistical analysis using sample statistics, histograms, and linear regression

Discrete Mathematics (ASU Course: MAT 243)

1. Foundations: Logic and Proofs: understand mathematical reasoning and ability to construct mathematical proofs; mathematical induction. (Chapter 1 & 5)
2. Combinatorial Analysis: ability to solve counting problems. (Chapter 6 & 8)
3. Elementary Number Theory: (Chapter 4)
4. Discrete Probability: fundamentals of probability theory, conditional probability, random variables. (Chapter 7)
5. Graph Theory: basics of graph theory including properties of trees. (Chapter 10-11)

**Digital Signal Processing (ASU Course: EEE 203)**

1. Signals: continuous-time and discrete-time; unit step; unit impulse; sinusoids; transformations of the time variable. (Chapter 1)

2. Systems: LTI systems -- linearity, time-invariance, causality, stability; impulse response; convolution (graphical as well as analytical); block diagrams, input-output equations. (Chapter 1, 2)

3. Fourier Transform (FT): calculation of forward and inverse transform of simple signals; use FT properties to determine the FT of a transformed signal; frequency response. (Chapter 4)

4. Discrete-Time Fourier Transform (DTFT): calculation of forward and inverse transform of simple signals; use DTFT properties to determine the DTFT of a transformed signal; frequency response. (Chapter 5)

5. Sampling: converting a continuous-time signal to a discrete-time signal; sampling theorem. (Chapter 7)

6. z-Transform: calculation of forward and inverse transform of simple signals; region of convergence; properties. (Chapter 10)

**Computer Architecture & Organization (ASU Course: CSE 230)**

1. Assembly Language Programming: Understand assembly language, and write assembly language programs for simple problems.

2. Procedure Calling Convention: Know about register conventions, including caller saved, callee saved, argument and return value registers. Student should be able to write procedures and recursive functions in assembly language.

3. Data Representation: Understand the data representation (unsigned, 2’s complement, and floating point) inside the processor, and perform arithmetic operations on them. An understanding of hardware structures to perform these operations will be a plus.

4. Pipelined Processor Design: Understand the working of a single-cycle, and pipelined processor. Pipeline hazards, and basic techniques on how to avoid them.

5. Memory Hierarchy: Understand the rationale behind the memory organization, and know how caches operate.

6. I/O: Have a basic understanding of storage and I/O.

*Updated September 4, 2017*
7. Advanced Computer Architecture: Be aware of the trends in computer organization and design, including superscalar, multi-threading, and multi-core architectures.

**Algorithms and Data Structures (ASU Course: CSE 310)**

1. Basics of algorithm design and analysis (Chapter 1 to 3).
2. Divide and Conquer (Chapter 4)
3. Elementary Data Structure, hash tables (Chapter 10,11)
4. Sorting: Heapsort (Chapter 6), Quicksort (Chapter 7), Radix Sort and Bucket Sort (Chapter 8)
5. Searching: Binary Search Trees. (Chapter 12), red-black trees (Chapter 13.1-4)
6. Dynamic Programming (Chapter 15)
7. Greedy Algorithms. (Chapter 16)
8. Minimum Spanning Tree (Chapter 23)
9. Shortest-Path Problems (Chapter 24-25)
10. Elementary Graph Theory (Chapter 22)
11. String Matching (Chapter 32)
12. NP-completeness (Chapter 34)
